

# BEN BRENNMAN STORMWATER POND WEIR WALLS

The **weir walls** help slow the water down and settle pollutants that can be harmful to wildlife and plants (there is a second **weir wall** located under the longer pedestrian bridge).

This **weir wall** separates the forebay from the main pond – much like a wall in your home separating rooms.

More often than not you will see a lot of wildlife hanging out around the **weir wall**.  
**What can you see there today?**

This tour highlights how the forebay, weir walls, aquatic features, and upflow gravel filter **all work together to help reduce water pollution.**

Cormorant

Eastern Painted Turtle

Canada Geese

Black Bass

Great Blue Heron

CITY OF ALEXANDRIA  
EST. 1749

Sweep driveways instead of hosing.

Avoid using pesticides, fertilizers, and insecticides.

Don't feed the wildlife.
