

TOPIC

School Awareness and Safety of Students

TOPIC DESCRIPTION

My issue is about the safety and awareness of students or lack there of. I feel that the rate of students who feel down or unheard of within schools is too high. This makes it harder for students to focus and finish their work and keeps the problem balled up inside. this affects ACHS because their students don't feel safe within their school.

BASELINE DATA & GOAL

My goal is to make students feel more safe and heard within their schools by adding more adults or people that the students can talk to.

it is shown that the rate of students that feel safe within schools have lowered by 10% over the last decade becoming 39% from the 49%

I want to have more people to talk to within schools to make the students feel more safe and heard.

CYCP GOAL & STRATEGIC AREA

Goal which is shown within the safety and security which is to make sure that all children, youth, and families are physically safe and healthy.

WHAT IS HAPPENING RIGHT NOW?

this graph shows how safe students feel within their school and it matters causes the schools should want all their students to feel safe

this graph shows how many times a student thinks about commuting suicide in month and it matters cause no school should want their students to think about commuting suicide.

this graph shows how heard students feel within school and this matters cause a student words should matter and the students should feel like they do

Things they have already tried was having therapy groups to help students going through tough times and teach them how to help others. however it wasn't the most useful cause as shown kids still don't feel safe or heard within their school

WHAT HAS ALREADY BEEN TRIED?

Many schools have a therapy program that helps students and teaches them how to help each other. Also many schools have a test which happens twice a year that asks how students feel about school and how they are feeling themselves (ACHA-National College Health Assessment (NCHA)).

WHO CAN HELP?

RAISE is a group of people from many backgrounds that want to help spread awareness of how youth feel

ACPS Safety and Security Services helps keep students and others safe within schools and are the reason the security guards are there.

WHAT HAS BEEN DONE SO FAR?

Quantity: What actions have been taken?

Small therapy groups where the students learn how to open up and how to help others do the same.

Quality: How well are those actions working?

not very much from what the data shown

IS IT ACTUALLY HELPING?

The data shown that instead of going up the % of people that feel safe in school went down which is not good at all.

So no they action isn't helping as much but its still keeping some feeling safe within school.

WHAT SHOULD CHANGE? (YOUR SOLUTION)

My idea to fix this problem is by adding more adults or people that students can talk to about their problems and help them see that they don't need to hide it.

From my survey it showed that most students would like more adults to talk to, with the data showing 13 out of 25 saying they would like more adults to talk to. Also it shows that even if a little out of the 25, 1 or more said they do think about commuting suicide which could be solved with more people around to talk too.

WHAT WILL HAPPEN NEXT?

If my solution is used schools will have a more open and safe area for its students with them also being able to feel more safe and open when it comes to their problems.

which this would end up benefiting students within the school.
